## QUANTITATIVE ABILITY

Q1. Pipe A takes 16 min to fill a tank. Pipes B and C, whose cross-sectional circumferences are in the ratio 2:3, fill another tank twice as big as the first. If $A$ has a cross-sectional circumference that is one-third of C , how long will it take for $B$ and $C$ to fill the second tank? (Assume the rate at which water flows through a unit cross-sectional area is same for all the three pipes.)
